

Enable Quick Time

If you are using Mac with OS X El capitan(10.11), the Quick Time is disabled by default, you need to enable Quick Time, then you are able to access the camera via safari or Firefox on Mac with the latest El captitan . Please do below things to enable Quick Time:

1. Set Port

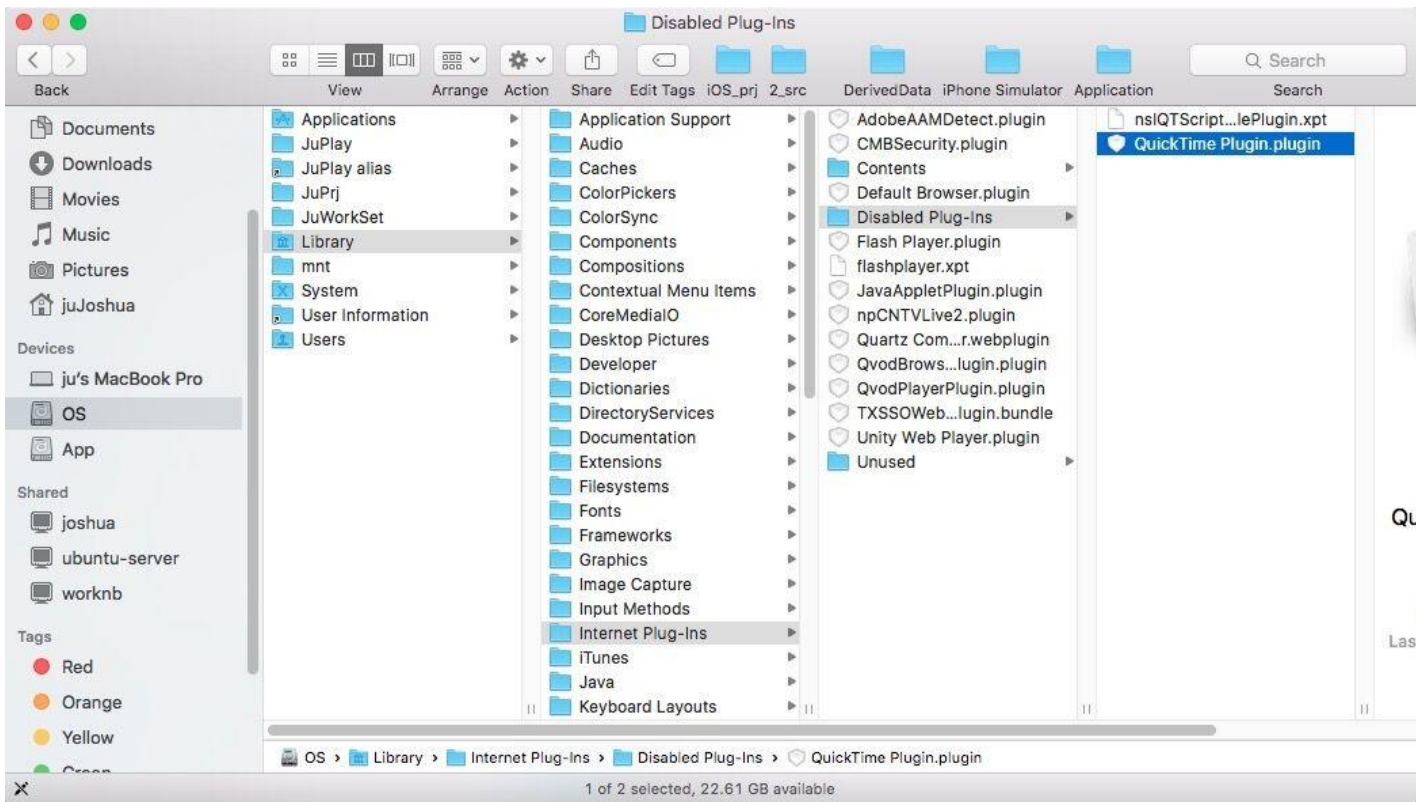

Open Terminal on Mac, then type in command “qtdefaults write TransportSettings HTTP port”(HTTP port is for camera’s port number, for example: port is 80, you should type in qtdefaults write TransportSettings HTTP80), then press Enter, you will get below information, that’s to say set port successfully.

```
liumei — -bash — 80x24
Last login: Sat Apr 16 10:09:54 on console
[liumeideMacBook-Air:~ liumei$ qtdefaults write TransportSettings HTTP8077
Command line interface to access QuickTime preferences
Usage:

--Commands for reading QuickTime preferences:
'qtdefaults read' followed by one of the following:
LegacyAudioCodecsEnabled      Displays whether legacy audio codecs a
re enabled for exporting.
LegacyVideoCodecs             Displays all enabled legacy video code
cs.

urrently being used by the QuickTime plugin.
TransportSettings             Displays the transport settings being
used by QuickTime for streaming media.
```

2. Please find `/Library/Internet Plug-Ins/Disabled Plug-Ins/QuickTime Plugin.plugin`, then copy the `QuickTime Plugin.plugin` to `/Library/Internet Plug-Ins` this directory.

3. Close the Safari or Firefox, then re log on the camera web interface.
